

Sensors To Include

For *time series scalar plots*:

Data Product Options

Quality Control: Clean Data Raw Data

Sensors to include: All State of Environment sensors only

Resample:

(Type/Period)

All

When this option is selected, all sensors available to the instrument or location shall be included in the requested data product.

This is the default option.

Oceans 2.0 API filter: `dpo_sensorstoinclude=0`

State of Environment sensors only

When this option is selected, a filter is applied so that only a specific set of sensors are included in the requested data product. The included sensors generally consist of sensors that represent an environmental property such as temperature, salinity, ice draft, etc. Non-standard, compromised or uncorrected sensors are excluded. See [here](#).

Oceans 2.0 API filter: `dpo_sensorstoinclude=1`

File-name mode field

If the sensors to include option is set State of Environment sensors only, 'stateEnvSensorsOnly' is added to the file-name. 'stateEnvPlot' is added instead, if the search type is also 'Variables by Location'.
