

# Template

## Data Product Documentation Template

This is a description of this data product type

[Oceans 2.0 API filter](#): dataProductCode=<look this up from the dataproduct table>

### Revision History

1. Date: Beta product released
2. Date: Second release (beta designation removed)

### Data Product Options

#### Specific Option Name

use the include statement to get the data product option page. Each of the options should have an API filter (in the included page, putting it here as a guide):

[Oceans 2.0 API filter](#): dpo\_qualityControl=0

```
{include: page title}
```

### Formats

The formats available and basic information will be described here. Also include post-processing requirements, as necessary: Software or files needed for user to use data product

[Oceans 2.0 API filter](#): extension=<look this up from the dataproductformat table, it's the archivefileextension>

PNG

resolution, dimensions of plot

### Examples

- PNG - sample plot
- CSV - segment of textfile, shown with sample for download
- mat - view of structure, with sample for download
- others - sample for download

### Pseudocode

```
code goes here
```

### CodeRunner Templates

If there is a coderunner template that produces same result, refer to it here.
