Kongsberg EA600 Raw Data

The EA600 is a single-beam hydrographic echosounder that can operate up to four high power transceivers simultaneously. Files are provided in the manufacturer's format as collected during maintenance cruises.

Oceans 3.0 API filter: `dataProductCode=KEA600RD`

Revision History

1. 2014-01-25: Manufacturer .raw format released

Formats

.raw files are provided as they contain all of the necessary data to reconstruct the survey. Some .out, .xyz, and .txt files may be available upon request for the same time periods as the .raw files. Files may be read using the Kongsberg EA400 software.

RAW

These files contain all the necessary data for reconstruction of the situation during the real survey. The data include amplitude, phase, navigation data, annotation input etc. The echo sounder program reads these files during replay.
