

Available Locations

The following is a dynamic list of all of the locations that have data. It is being pulled from the [locations](#) web service using the URL [http://data.oceannetworks.ca/api/locations?method=get&token=\[YOUR_TOKEN_HERE\]](http://data.oceannetworks.ca/api/locations?method=get&token=[YOUR_TOKEN_HERE])

The **locationCode** values can be used as a filter on the [devices](#), [deviceCategories](#), [properties](#), [dataProducts](#) and [dataProductDelivery](#) services. Filters on the **locationCode**, **locationName** and **description** columns can be used to reduce the results returned from the [locations](#) service. The **dataSearchURL** column provides a link to the location in the Data Search, for interactive download of data. The **hasDeviceData** indicates that data products can be requested using a device category code for the location and the **hasPropertyData** indicates that data products can be requested using a property code for the location.

Error rendering macro 'json-table'

Error 500 retrieving server data from URL.
